

EAN:	4013288017741	Size:	205x37x37 mm
Part number:	05017010001	Weight:	121 g
Article number:	917 SPH	Country of origin:	CZ
		Customs tariff number:	82054000

- Chiseldriver for fastening, chiselling and loosening
- Hexagonal blade extending through the handle
- Multi-component Kraftform handle for fast and ergonomic screwdriving
- Impact cap and bolster for the transfer of higher torque
- The Wera Black Point tip offers an exact fit and optimum corrosion protection

Wera chiseldriver for screwdriving, chiseling, mortising and slackening stuck screws. With multi-component Kraftform handle for fast and smooth work. Kraftform Plus: Hard handle zones for high working speeds, while soft handle zones guarantee a high torque transfer. The pound-thru hexagonal blade made of premium bit material ensures power transmission without loss even at hammer blows. Tough tempered material to prevent the blade from splintering or breaking. With integrated impact cap to increase service life and reduce risk of splintering. Higher torques can be transmitted with open-end or ring spanners using the integrated hexagonal wrench aid. The Wera Black Point tip and a sophisticated hardening process guarantee a long usability for the tip, increased corrosion protection and exact fitting accuracy. With hexagon anti-roll protection to avoid bits from rolling away annoyingly in the workplace.

Integrated impact cap

Screwdrivers are often misused as chisels. This can be dangerous. The chiseldriver is the solution when not only screwdriving is required. For fastening, chiselling and loosening seized screws. Wera chiseldriver: the screwdriver whenever the going gets tough!

Wera Black Point tip

The Wera Black Point tip and a refined hardening process ensure long service life of the tip, improved corrosion protection and an exact fit.

Pound-thru blade

An integrated impact cap lengthens the service life and reduces the danger of splintering. Nevertheless, always wear protective goggles.

Integrated hex bolster

A hexagon blade made out of high-quality bit material extends right through the handle - thereby ensuring full transfer of force, even when struck with a hammer. The ductile tempered material prevents the blade from splintering or breaking.

Integrated hex bolster

Greater torque can be transferred by fitting an open-jaw or ring spanner over the integrated hex bolster.

Kraftform

The basic idea for the prototype of the Kraftform handle - that the hand should dictate the design - has, right through to today, proved to be correct. In cooperation with the internationally recognised Fraunhofer IAO Institute, Wera developed a screwdriver handle designed to match the shape of the human hand as long ago as the 1960s. After a long development phase, the Wera Kraftform handle was launched to the market in 1968. It has been optimised through the years with new technologies, but has kept its proven shape. After all, the human hand has not changed either.

Prevents hand injuries

The outstanding design of the Kraftform handle that fits perfectly into the hand prevents hand injuries such as blisters and calluses.

Non-roll feature

The hexagonal non-roll feature prevents any rolling away at the workplace.
