Series 32 auto-cushioned: applicable mass according to the cylinder's speed

CHOICE OF THE AUTO-CUSHIONED CYLINDER

- 1) Choose the size according to the force needed in the application
- 2) Check on the graph* if the working conditions - mass and speed - intersect at a point below the curve that corresponds to the size chosen

m = mass applied to the cylinder (kg)

v = speed of the cylinder (mm/s)

Example:

Diameter = 50 mm;

Speed = 340 mm/s;

Max applicable mass = 50kg;

*Graphs obtained at a pressure of 5 bar.

Mounting example

- 1 = Rear mounting
2 = Through mounting

N.B. For through mounting with screws through the cylinder it is recommended to use screws made from non-magnetic material. Cylinder Ø 125 has rear mounting (1) only.
