

INSTALLATION INSTRUCTIONS

If installation is on a Quantum engine equipped with a primer bulb, you may need to remove material from the assembly guide rib on the air cleaner base for proper fitment.

Test fit the air cleaner base onto the carburetor. If any of the assembly guide rib on the air cleaner base is interfering with the fitment of the carburetor, mark that area and remove the material until proper fitment is achieved. Please reference the image below as an example. NOTE: Air cleaner base may look different

NOTE: The carburetor and air cleaner base MUST completely seal against the air cleaner gasket for proper engine performance.
