## How to make a budget horsefly-trap with a bucket?

**1.** DRILL A HOLE IN THE TOP OF THE BUCKET AND STRING A ROPE THROUGH THE HOLE. RUN THE ROPE THROUGH A METAL RING AND TIE A KNOT SO THAT THE ROPE CANNOT GO BACK THROUGH THE HOLE. A BIG AND STURDY KNOT MAY SUFFICE AS WELL.

**2.** SCREW A SMALL HOOK IN THE UNDERSIDE OF A BAR THAT IS APPROXIMATELY 50CM LONG. HANG THE ROPE THAT IS ATTACHED TO THE BUCKET ON THE HOOK (SEE PICTURE). THE IDEAL HEIGHT OF THE BUCKET IS 100 CM ABOVE THE GROUND.

**3.** MOUNT THE BAR ONTO ONE OF THE FIELD POLES. IT'S IMPORTANT THAT IT IS PLACED NEAR VEGETATION, IF POSSIBLE. IT SHOULD ALSO CATCH ENOUGH SUNLIGHT SO THAT THE BUCKET CAN GET WARM.

**4.** FINALLY YOU APPLY THE GLUE TO THE OUTSIDE OF THE BUCKET WHILE WEARING GLOVES, IT'S CALLED STICKY FOR A REASON.

**5.** THE BUCKET HANGS ON THE OUTSIDE OF THE FIELD, BECAUSE IF YOU BRUSH AGAINST IT ONCE THE HORSEFLIES WILL STICK TO YOUR HORSE. IT WON'T DO HIM HARM, BUT IT'S CERTAINLY NOT PLEASANT.

## We also offer complete buckets

Apart from the Sticky Trap glue, we also offer pre-drilled buckets with rope and ready for use. Do you want to know more about Sticky Trap, selling our product in your store, or do you have any other questions? Feel free to contact us.

Kind regards,  
Sticky Trap

## INFORMATION STICKY TRAP

## Sticky-Trap horsefly glue

Sticky Trap is the horsefly glue that is used in glue traps. The horsefly glue is specially developed for catching horseflies, hornets and other bloodsucking insects. The basis of the recipe originates from the US and is used all over the world to catch aggressive insects. **The Sticky Trap horsefly trap glue is transparent, stays sticky for a long time (8-16 weeks)**, is environmentally friendly and there is thanks to a special design hardly any by-catch on the traps made with this special insect glue! The Sticky Trap glue is eco-friendly and is also used for the famed Loer Glue Trap by Kylix. The glue is used in combination with a dark object that moves. The bloodthirsty horsefly-female thinks the object is her prey and simply can't resist attacking it. You can use a horsefly-ball, black plastic bucket or dark piece of plastic. **The Sticky Trap horsefly glue is affordable and quickly solves your horsefly-problem!**

The Sticky Trap horsefly glue is rainproof and is effective for 8-16 weeks.

## Using Sticky Trap horsefly glue

Our Sticky Trap horsefly glue is used for making the well-known and **cheapest horsefly trap made with only a black bucket** which hangs. This concept was discovered in Belgium in the summer of 2014 and the horsefly traps are now widely used in retirement homes for horses, riding stables, zoo's and livestock farms but also at swimming pools, sports fields and campsites where there are a large number of these horseflies. It has the same basic as the normal horsefly-trap but it's much cheaper with better result! **The Sticky Trap horsefly glue is specially designed, environmentally friendly, safe to use and poses no threat to other animals.** Bees, butterflies and other important species who pollinate flowers search for nectar and sweetness and thanks to a special formula they won't get attracted to Sticky Trap. This also means that there is hardly any by-catch! The horsefly glue has an adhesive power that is specially designed to catch horseflies, hornets and small biting insects.

## Horsefly traps with Sticky Trap horsefly glue:

The Loer glue trap

A black suspended horsefly-ball with Sticky Trap glue

We point this out because there is a number of companies that promote mice glue that is poisonous and prohibited in Europe. If a bird, horse or other animal gets stuck in this type of glue it can cause real problems, which can be avoided!

**Be careful with other types of glue!**
