

Modified P550588 to fit Twist&Drain product line ensures fit form and filtration function

P550588 has been slightly modified to give the filter access to all the advantages of Donaldson's Twist&Drain product range. The new design does not affect the fit form and function of the filter.

As a visual difference, it's clear that the new P550588 is a member from our Twist&Drain family, and therefore can make use of all our Twist&Drain range advantages:

P550588 - Old version

P550588 - New version

Improved Twist&Drain™ Valve

- Easy to grip profile - wide drain valve provides a better grip
- Easy to use - fewer turns required to water drain versus typical three turns
- Self-venting design - allows for continuous water flow (no slow drips, no need to open a secondary vent)
- Keeps you dry - integrated hose barb for draining water into a container

Options & Accessories

- Clear water collection bowl option for easy inspection
- ...

The old version of P550588 has an external seal at the thread, at the top of the filter. This seal is replaced on the new version by an internal thread seal on the grommet which is positioned inside the filter.
