

Design

The Hallite 754 double acting piston seal is a compact low friction seal for light to medium duty hydraulic cylinders. As standard, it comprises a tough, wear resistant thermoplastic elastomer face, (see below for face material options) which is pre-loaded by an O ring. The housing width allows a narrow width piston to be used, but it is recommended that an adequate bearing is mounted on one or both sides of the seal.

Housing dimensions for use with Hallite 87 and 506 bearing strip are given in the installation details. For further details of bearing strip grooves, please refer to the appropriate data sheets.

NB: Part numbers suffixed by "‡" indicate housing sizes to meet ISO 7425-1.

Features

- Low breakout and operating friction levels
- Rapid recovery of face after assembly
- More tolerant to contamination than common PTFE equivalents
- Excellent position holding characteristics under load
- · Compatible with most hydraulic fluids
- · Excellent wear resistance
- Operates on a wide range of surface
- Ideal for use with Hallite 506 or 87 bearing
- ISO 7425 housing

Material Options

Face material:

Polyster elastomer - standard Red 55D Last digit of part no.

Hydrolysis stabilised polyester elastomer Dark Red 72D Last digit of part no.
