

## Design

The Hallite 764 is a compact seal for light to medium duty hydraulic cylinders. It is a double acting piston seal with single acting capabilities. This makes it an excellent choice for double acting applications where minimal dynamic leakage is required.

The Hallite 764 comprises of a tough elastomeric face that is pre-loaded by an O ring. The housing width allows a narrow width piston to be used, but it is recommended that an adequate bearing is mounted on one or both sides of the seal.

Housing dimensions for use with Hallite 87 and 506 bearing strip are given in the installation details. For further details on bearing strip grooves, please refer to the appropriate data sheets.

**NB:** Part numbers suffixed by “+” indicate housing sizes to meet ISO 7425-1.

## Features

- Double acting seal with single acting capabilities
- Excellent wear resistance
- High extrusion resistance ideal for use with Hallite 506 or 87
- More tolerant to dirt and contamination than common PTFE faces
- Rapid recovery after assembly
- Advanced face geometry provides enhanced dynamic and static sealing
- ISO 7425 housing

## Technical details

### Operating conditions

Maximum Speed	1.0 m/sec
Temperature Range	-30°C + 110°C
Maximum Pressure	250 bar

### Inch
